

Chesapeake Boathouse ©

©2007, Gardensheds Inc.

Over the years we've had numerous requests from boating aficionados seeking a quality boathouse. We listened and are pleased to introduce the most recent addition to our Gardenshed® line-up of distinct buildings. Whether you have a shell, canoe, small outrigger, or Laser sailboat, our Chesapeake Boathouse® is the perfect storage facility to house your boat and equipment. An optional pulley system can hoist the boat into the underside of the roof. A loft with moveable ladder at the end of the building provides easy access to additional storage space. Choose from a selection of three door patterns. Standard siding is horizontal cypress with bead detail. Optional siding includes cedar shake or board and batten. Our windows are crafted of solid mahogany with divided lites and an integral copper drip cap. Like all of our buildings, our framing is unique and obvious to any eye. We mill and dimension our rough fir to a smooth and true board measuring two inches by four inches. This results in a dimensioned board that is 50% greater in material and strength than a standard 2 x 4 with nominal dimensions of 1 ½ inches by 3 ½ inches. This, together with our construction technique, creates a building that is rock solid with long-term stability. We go the extra mile for the framing because it is the foundation of any structure. Standard Boat House size is 10' x 20', with custom sizes available upon request.
