©1994, Vau 1-166-516

Admittedly, we're partial to small-scale buildings. With our Vineyard Tool Shed® we've managed to create two distinct "rooms" in a small building footprint. One section provides for functional tool storage with wall-mounted tool racks and shelving. The other section provides for a workshop area enhanced with an "L" shaped workbench with lower shelf. An overhead storage loft with ladder provides for further storage capacity. Solid mahogany windows, each with copper drip caps, allow for natural light to diffuse both the storage and workspace. The building design features an overhang gable roof with scalloped siding. A variety of exterior and interior options are available to complete your building. While intended for gardening, this small building can also be ideally used as an arts and crafts studio space. Your tool shed arrives fully assembled and finished ready for your enjoyment the day of delivery.
